Stone Bond Enters an Alliance Agreement with Sharepoint Data Services (SDS)

HOUSTON--(BUSINESS WIRE)--Stone Bond Technologies, provider of next generation integration software tools, and SharePoint Data Services (SDS), creator of high end, yet practical SharePoint products, today announce their strategic alliance. The companies intend to leverage each other's experience and expertise to offer more comprehensive solutions to current and potential clients.

Stone Bond's Enterprise Enabler[®] connectivity greatly simplifies implementation of Microsoft Office SharePoint Server 2007 (MOSS). Without any programming in the implementation process, Enterprise Enabler seamlessly integrates applications and data with the SharePoint Server 2007 BDC, bringing in a host of new applications and sources previously unavailable to SharePoint users. Development and subsequent maintenance time and cost will be greatly reduced for SharePoint implementation.

"I am very excited to begin working with the team at SDS. As SDS has a stellar track record with SharePoint based solutions and services, they were an obvious partner choice given our recent SharePoint connectivity announcement and strategy. Our Alliance will allow existing and future clients the ability to extend the use of SharePoint and integrate into a broader range of data sources thus achieving far more comprehensive solutions with little overhead and programming," said Richard Garcia, Director of Global Sales at Stone Bond Technologies.

Jerry King, President of SharePoint Data Services said, "SharePoint Data Services (SDS) is pleased to partner with Stone Bond Technologies to further help our clients better manage their day-to-day operations by integrating all software functionality into one main SharePoint dashboard. This partnership will take our software to the next level. Our customers will immediately see the benefit of this enhancement when integrated with the Enterprise software."

About Stone Bond

Stone Bond Technologies's Enterprise Enabler (EE) is a next-generation integration software product based on synchronapse[™] technology, a powerful, ultralight and agile framework that handles the "extra mile" of integration that usually requires custom programming. EE can be an enterprise infrastructure, can support a single project, or can be embedded into applications. Visit www.stonebond.com for more information or contact us at 713-622-8798.

About SharePoint Data Services

SharePoint Data Services has helped businesses large and small achieve their maximum potential by providing customized technology solutions to meet their needs. Its team of skilled consultants, developers, support technicians and integrated back office support staff continues to deliver proven ways to streamline business and cut costs. SharePoint Data Services creates high end, yet practical SharePoint products. It's Web Parts and Solution Accelerators "plug in" to SharePoint - extending and enhancing the functionality beyond what you get "out-of-the-box". From simple Web Parts, such as improved calendar views, to their Solution Accelerators that provide more comprehensive business functions, their products are designed to dramatically improve user acceptance and operations. Visit www.sharepointdataservices.com for more information or contact us at 281-794-6531.
